

ABSTRACT OF THE DISCLOSURE

1 A print by reference method for a portable wireless device allows
2 the portable wireless device to obtain a reference that indicates where a print
3 content is located and to wirelessly communicate the reference to a print device
4 causing the print device to use the reference to locate and obtain a desired set
5 of print content and further causing the print device to print the desired print
6 content. Alternatively, the method may cause the portable wireless device to
7 communicate the reference to a print service which responds to the reference
8 by downloading the print content and then forwarding the print content to a
9 print device for printing.
